LMM Stage Multitrack — Quick Start Guide

The ultimate suite for live bands. From your tracks to the stage in six steps.

1. What it does

It plays your band's **multitracks** live: the **backing track** and the **backing vocals** go to the audience; the **click** and the voice **cues** ("Chorus", "Bridge", "one, two, three, four") go to the in-ears only. Lyrics appear on a second screen and every section of the song has its marker. Everything works offline and is stored on your Mac.

2. Try the demo songs

When you open the app there are three DEMO songs. Press **ENABLE AUDIO** and then **GO**. Move the faders, press MUTE and SOLO, and enter **SHOW MODE** to see the stage screen. There is nothing to save: the app saves everything by itself.

3. Load your first song

1. In the setlist, **Add**: name, BPM and key.
2. In the MIXER, **Import folder** and pick the folder with the song's audio files. The app assigns the files by name (click, cues, base, choir). You can also load file by file with ⬆ on each track.
3. No click track? Press **MAGIC CLICK**: the app generates a metronome for the whole song.
4. If an audio file needs fixing, ⬇ downloads it as it is; edit it and load it again with ⬆.

4. Markers, lyrics and cues

1. Open **LYRICS AND MARKERS**.
2. Paste the lyrics with tags in square brackets (`[VERSE 1]` , `[CHORUS]`) or import them from a text file.
3. Press **IMPORT TAGS TO MARKERS**: the app creates a marker per section. Then adjust the position of each one with **Set here** while you listen.
4. On each marker choose the **voice cue** you want to hear in the in-ears before the section.
5. **Export .LMM** saves lyrics and markers into a small file to share; **Import .LMM** loads them into a song.

5. Connect the outputs

OUTPUTS button. Three ways to work:

Mode	What for
Stereo	Rehearsing with headphones or speakers.
Split L/R	A single stereo cable: left = click and cues (in-ears), right = backing track and vocals (PA).
Multichannel	Audio interface with several outputs: each track to its own.

Use the **test tone** (⚡) on each track to check it comes out where it should.

6. Play: Show Mode

SHOW MODE shows only what you need on stage: song, current section, countdown to the next one, lyrics and a large transport.

Action	Default key
GO / Pause	Space
Next song and GO	Enter
Next / previous song	→ / ←
Jump to section 1…9	1…9
Mute or unmute the click	M
Show or hide the lyrics	L
Full screen	F
Panic (fade and silence)	Esc

Keys can be changed under **KEYBOARD**, where USB and MIDI pedals are assigned too. **2ND SCREEN** opens the lyrics in another window for a monitor or projector.

7. Before the gig

- Connect the interface by cable and the Mac to power. Avoid Bluetooth and wireless displays.
- Check every output with the test tone.
- **SHOW → SAVE FULL SESSION** makes a copy of the whole show (songs and audio) as a backup or to take it to another Mac.
- **PRINTABLE SET LIST (Word)** produces the sheet for each musician.

Every function is described in detail in the **user manual** (Help menu).
